

Dylan Robinson

dylob123@gmail.com | github.com/djdillybdev | +34 603 21 06 13 | linkedin.com/in/dylan-robinson-78b643157

Software Engineer with 4+ years of experience building and operating high-scale, cloud-native services on AWS. Specialized in event-driven architectures and high-throughput APIs (100M+ weekly requests), with a focus on reliability, observability, and production incident response.

Skills

Languages: TypeScript, JavaScript, Python, SQL

Backend & Systems: Node.js, FastAPI, REST APIs, distributed systems, event-driven architecture

Cloud & AWS: AWS (Lambda, SQS, DynamoDB, S3), serverless architectures, cloud-native design

Reliability & Observability: monitoring, logging, alerting, root cause analysis, fault tolerance

Testing & CI/CD: PyTest, Jest, GitHub Actions, unit/integration testing

Security: OAuth2/JWT, IAM, access control, data privacy

Tools: Docker, Git, React, Svelte, Ansible, Elasticsearch/OpenSearch, Copilot

Experience

Software Engineer (Master's Internship), Cofrai – Madrid, Spain

June 2025 – May 2026

- Built backend features in a Laravel SaaS platform, ensuring secure and reliable API integrations with external services.
- Diagnosed and resolved production issues, improving system stability and reducing user-facing errors.
- Built a Mapbox-based geospatial search interface enabling maintenance teams to locate 100+ customers across Spain, reducing manual lookup time.

Software Engineer II, 1upHealth – Boston, Massachusetts, USA

June 2020 – August 2024

- Developed and operated a high-throughput Node.js API for FHIR resources handling 100M+ weekly requests in a distributed AWS environment.
- Designed and maintained event-driven systems using AWS SQS, processing 600K+ daily messages for inter-service communication.
- Built serverless services using AWS Lambda, improving scalability and reducing operational overhead.
- Led development of a bulk export system for 100K+ patient records, ensuring correctness and reliability in large-scale data pipelines.
- Engineered a data lifecycle pipeline deleting 500M+ records, ensuring compliance and system integrity.
- Investigated and resolved production incidents, performing root cause analysis and implementing long-term reliability improvements.
- Implemented structured logging and monitoring to improve debugging speed and incident response time

Software Engineer Co-op, Decibel Therapeutics – Boston, Massachusetts, USA

July 2019 – December 2019

- Built a full-stack internal research platform using React, Node.js, GraphQL, and PostgreSQL.
- Implemented automation tools and testing workflows to improve reliability and operational efficiency.

Projects

Accessible Text Translation Pipeline | Python, NLP

github.com/djdillybdev/EMSE-Thesis

- Built a Python NLP pipeline and evaluated models from HuggingFace across large datasets, ensuring correctness and consistency of outputs.

YouTube Feed Aggregation Service | FastAPI, PostgreSQL, arq, Svelte

github.com/djdillybdev/ChooseYourTube

- Designed a FastAPI backend with asynchronous workers, handling concurrent tasks and external API interactions.
- Implemented JWT-based authentication and authorization, securing API endpoints and managing user access.
- Built background processing workflows with error handling and retry logic to improve system reliability.
- Developed PyTest-based tests for backend services to validate API behavior and asynchronous workflows.

Education

Universidad Politécnica de Madrid – European Master in Software Engineering

Expected July 2026

Northeastern University – Bachelor of Science in Computer Science

May 2021
